Graphical User Interface-Grafiksel Kullanıcı Arabirimi

İÇERİK

© 2003 Prentice Hall, Inc. All rights reserved.

Giriş

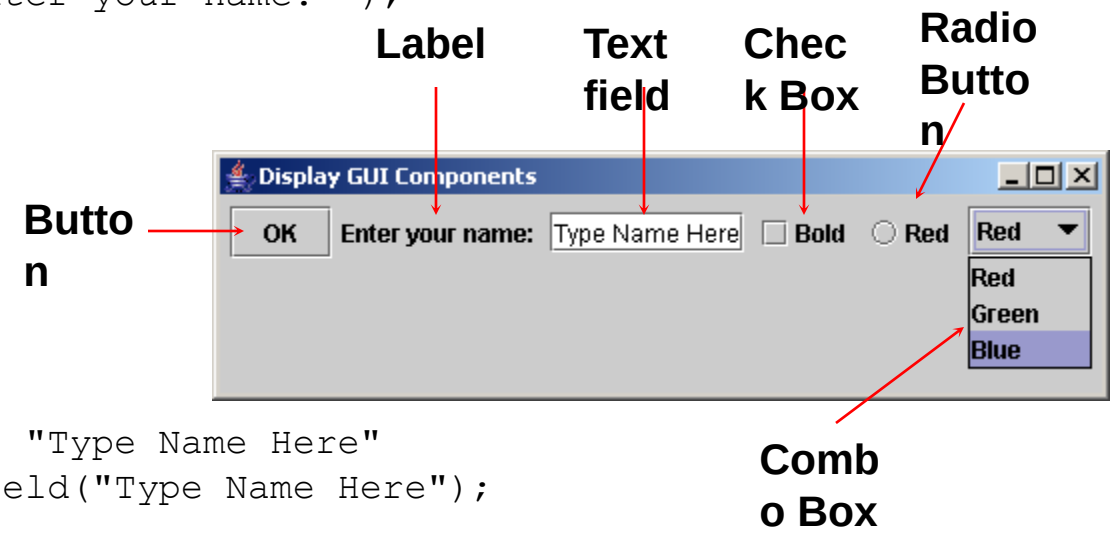
- Grafiksel kullanıcı arabirimi (GUI)
  - Programa farklı bakma hissi verir
  - Kullanıcılara temel düzeyde aşinalık sağlar.
  - GUI bileşenleri oluşturmayı sağlar.
    - Kullanıcı Mouse veya klavye aracılığıyla GUI bileşenleri ile etkileşim kurar.

© 2003 Prentice Hall, Inc. All rights reserved.

Creating GUI Objects

```
// Create a button with text OK
JButton jbtOK = new JButton("OK");

// Create a label with text "Enter your name: "
JLabel jlblName = new JLabel("Enter your name: ");
```



```
// Create a text field with text "Type Name Here"
JTextField jtfName = new JTextField("Type Name Here");

// Create a check box with text bold
JCheckBox jchkBold = new JCheckBox("Bold");

// Create a radio button with text red
JRadioButton jrbRed = new JRadioButton("Red");

// Create a combo box with choices red, green, and blue
JComboBox jcboColor = new JComboBox(new String[]{"Red",
  "Green", "Blue"});
```

© 2003 Prentice Hall, Inc. All rights reserved.

Bazı GUI bileşenleri

Bileşen	Tanımlama
`JLabel`	Değiştirilmez text veya ikonların bulunduğu alan
`JTextField`	Kullanıcının klavyeden bilgi girdiği alan. Alan aynı zamanda bilgi gösterir
`JButton`	Mouse ile tıklandığında bir olay tetikleyen alan
`JCheckBox`	Seçilip seçim dışı bırakılabilen alan
`JComboBox`	Kullanıcının tıklayarak seçim yapabildiği açılır liste
`JList`	Kullanıcının tıklayarak bir veya birden fazla eleman seçebildiği nesnelerin listesini içeren alan
`JPanel`	Bileşenlerin tutulduğu ve organize edildiği alan

© 2003 Prentice Hall, Inc. All rights reserved.

Swing Bileşenlerinin görünümü

- Swing GUI bileşenleri
  - Package `javax.swing`
  - Components originate from AWT (package `java.awt`)
  - Contain *look and feel*
    - Appearance and how users interact with program
  - *Lightweight components*
    - Written completely in Java

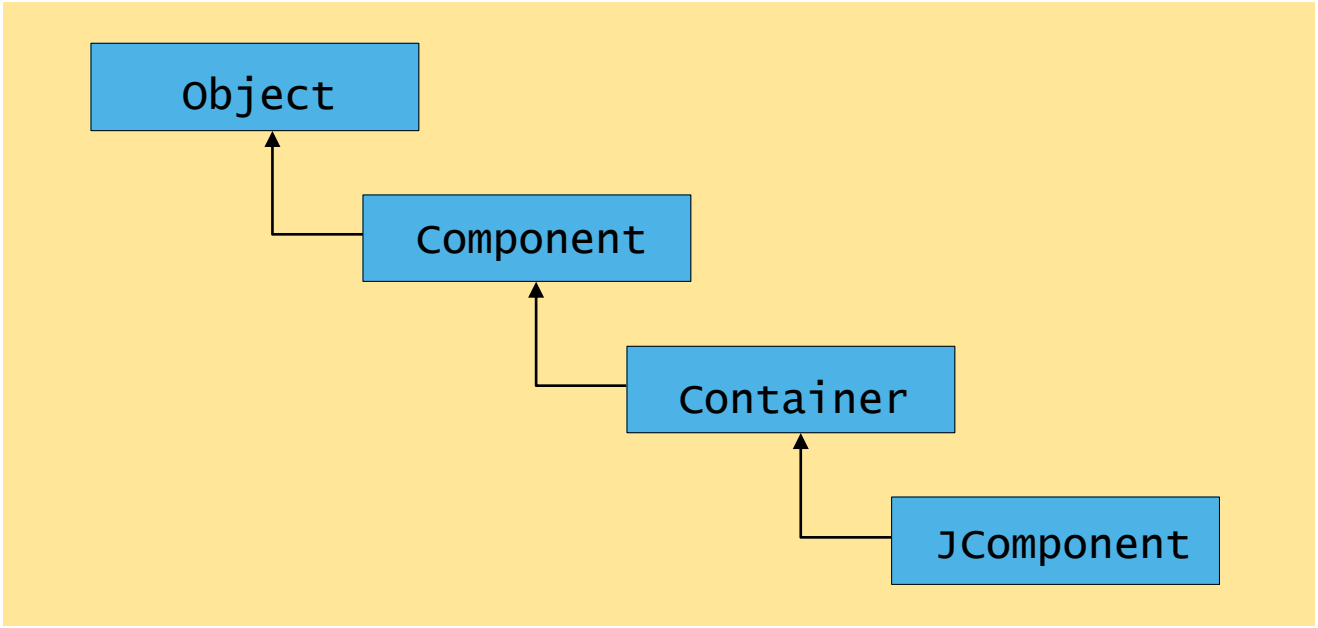
© 2003 Prentice Hall, Inc. All rights reserved.

13.2 Overview of Swing Components

- Class `Component`
  - Contains method `paint` for drawing `Component` onscreen
- Class `Container`
  - Collection of related components
  - Contains method `add` for adding components
- Class `JComponent`
  - *Pluggable look and feel* for customizing look and feel
  - Shortcut keys (*mnemonics*)
  - Common event-handling capabilities

© 2003 Prentice Hall, Inc. All rights reserved.

Fig. 13.3 Common superclasses of many of the Swing components

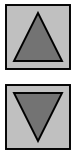


© 2003 Prentice Hall, Inc. All rights reserved.

13.3 JLabel

- Label
  - Provide text on GUI
  - Defined with class `JLabel`
  - Can display:
    - Single line of read-only text
    - Image
    - Text and image

© 2003 Prentice Hall, Inc. All rights reserved.



Outline

LabelTest.java

Line 8

Line 20

Line 21

```
1  // Fig. 13.4: LabelTest.java
2  // Demonstrating the JLabel class.
3  import java.awt.*;
4  import java.awt.event.*;
5  import javax.swing.*;
6
7  public class LabelTest extends JFrame {
8     private JLabel label1, label2, label3;
9
10    // set up GUI
11    public LabelTest()
12    {
13       super( "Testing JLabel" );
14
15       // get content pane and set its layout
16       Container container = getContentPane();
17       container.setLayout( new FlowLayout() );
18
19       // JLabel constructor with a string argument
20       label1 = new JLabel( "Label with text" );
21       label1.setToolTipText( "This is label1" );
22       container.add( label1 );
23
```

Declare three `JLabel`s

Create first `JLabel` with text "`Label with text`"

Tool tip is text that appears when user moves cursor over `JLabel`

Outline

```
24        // JLabel constructor with string, Icon and alignment arguments
25        Icon bug = new ImageIcon( "bug1.gif" );
26        label2 = new JLabel( "Label with text and icon", bug,
27           SwingConstants.LEFT );
28        label2.setToolTipText( "This is label2" );
29        container.add( label2 );
30
31        // JLabel constructor no arguments
32        label3 = new JLabel();
33        label3.setText( "Label with icon and text at bottom" );
34        label3.setIcon( bug );
35        label3.setHorizontalTextPosition( SwingConstants.CENTER );
36        label3.setVerticalTextPosition( SwingConstants.BOTTOM );
37        label3.setToolTipText( "This is label3" );
38        container.add( label3 );
39
40        setSize( 275, 170 );
41        setVisible( true );
42
43     } // end constructor
44
45     public static void main( String args[] )
46     {
47        LabelTest application = new LabelTest();
48        application.setDefaultCloseOperation( JFrame.EXIT_ON_CLOSE );
49     }
```

Create second `JLabel` with text to left of image

`LabelTest.java`

Lines 16-17

Lines 32-37

Create third `JLabel` with text below image

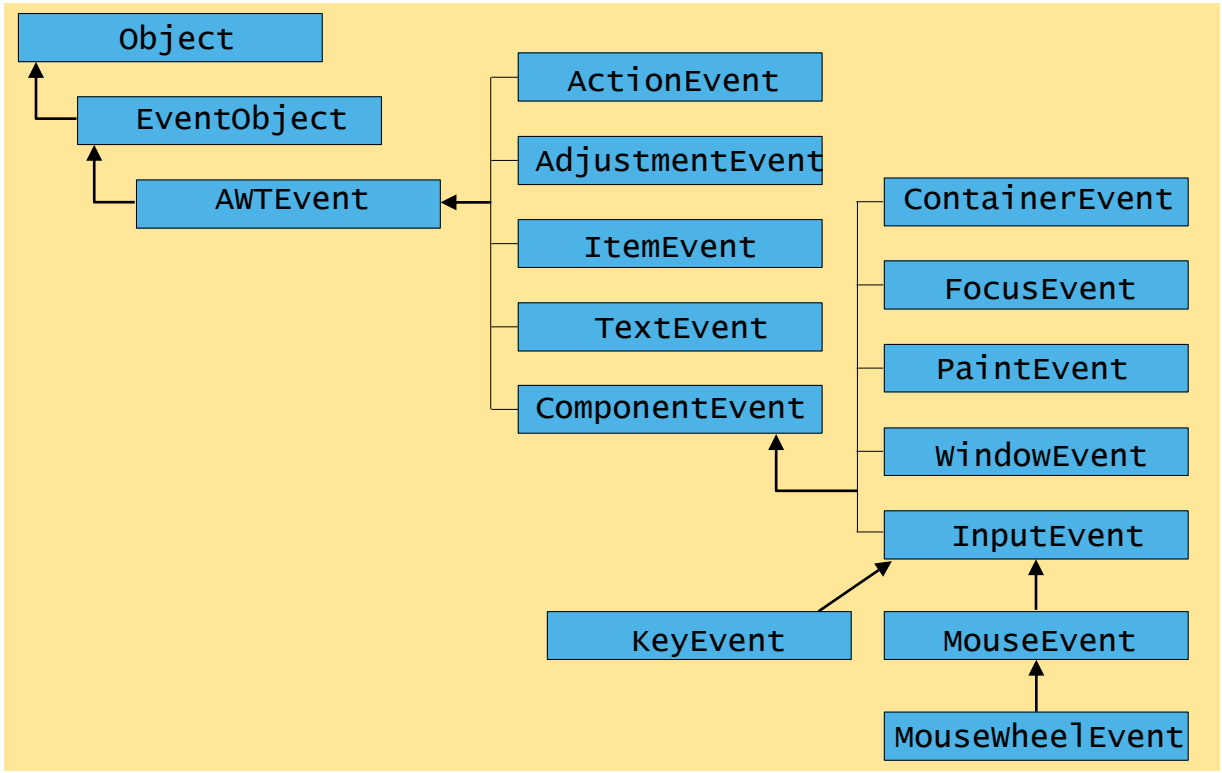
13.4 Event Handling

- GUIs are *event driven*
  - Generate *events* when user interacts with GUI
    - e.g., moving mouse, pressing button, typing in text field, etc.
    - Class `java.awt.AWTEvent`

© 2003 Prentice Hall, Inc. All rights reserved.

Fig. 13.5 Some event classes of package `java.awt.event`



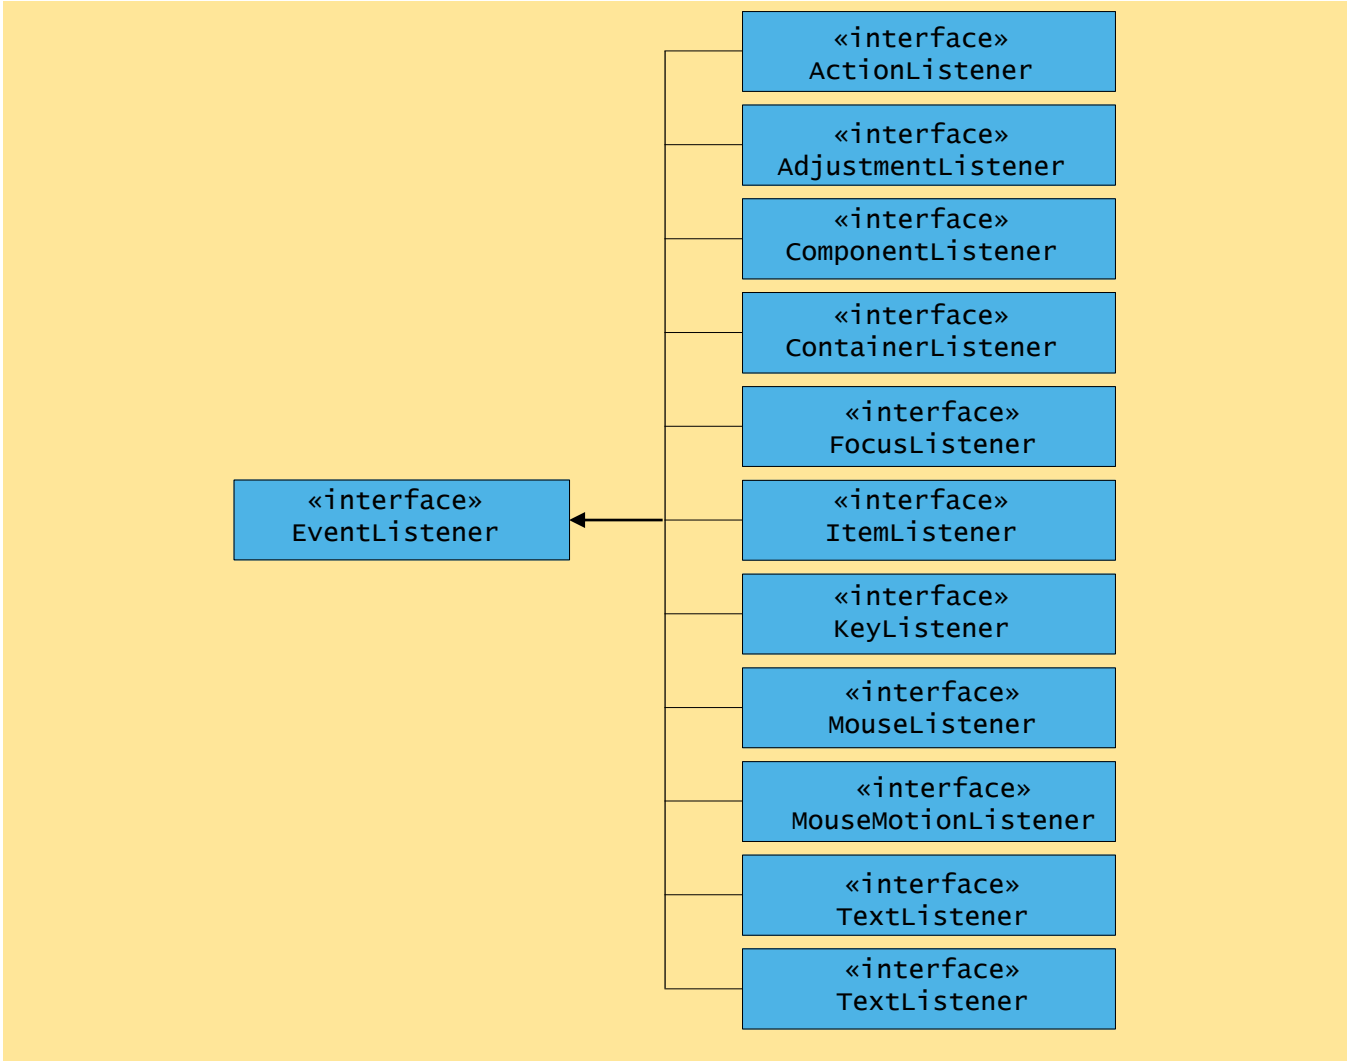
© 2003 Prentice Hall, Inc. All rights reserved.

13.4 Event Handling

- Event-handling model
  - Three parts
    - Event source
      - GUI component with which user interacts
    - Event object
      - Encapsulates information about event that occurred
    - Event listener
      - Receives event object when notified, then responds
  - Programmer must perform two tasks
    - Register event listener for event source
    - Implement event-handling method (event handler)

© 2003 Prentice Hall, Inc. All rights reserved.

Fig. 13.6 Event-listener interfaces of package `java.awt.event`

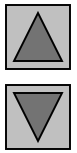


© 2003 Prentice Hall, Inc. All rights reserved.

13.5 TextFields

- `JTextField`
  - Single-line area in which user can enter text
- `JPasswordField`
  - Extends `JTextField`
  - Hides characters that user enters

© 2003 Prentice Hall, Inc. All rights reserved.



Outline

TextFieldTest.java

```
1  // Fig. 13.7: TextFieldTest.java
2  // Demonstrating the JTextField class.
3  import java.awt.*;
4  import java.awt.event.*;
5  import javax.swing.*;
6
7  public class TextFieldTest extends JFrame {
8     private JTextField textField1, textField2, textField3;
9     private JPasswordField passwordField;
10
11    // set up GUI
12    public TextFieldTest()
13    {
14       super( "Testing JTextField and JPasswordField" );
15
16       Container container = getContentPane();
17       container.setLayout( new FlowLayout() );
18
19       // construct textfield with default sizing
20       textField1 = new JTextField( 10 );
21       container.add( textField1 );
22
23       // construct textfield with default text
24       textField2 = new JTextField( "Enter text here" );
25       container.add( textField2 );
26
```

Declare three JTextFields and one JPasswordField

Line 24

First JTextField contains empty string

Second JTextField contains text "Enter text here"

© 2003 Prentice Hall, Inc.
All rights reserved.

```
27        // construct textfield with default text,
28        // 20 visible elements and no event handler
29        textField3 = new JTextField( "Uneditable text field", 20 );
30        textField3.setEditable( false );
31        container.add( textField3 );
32
33        // construct passwordfield with default text
34        passwordField = new JPasswordField( "Hidden text" );
35        container.add( passwordField );
36
37        // register event handlers
38        TextFieldHandler handler = new TextFieldHandler();
39        textField1.addActionListener( handler );
40        textField2.addActionListener( handler );
41        textField3.addActionListener( handler );
42        passwordField.addActionListener( handler );
43
44        setSize( 325, 100 );
45        setVisible( true );
46
47     } // end constructor TextFieldTest
48
49     public static void main( String args[] )
50     {
51        TextFieldTest application = new TextFieldTest();
52        application.setDefaultCloseOperation( JFrame.EXIT_ON_CLOSE );
53     }
```

Third `JTextField` contains uneditable text

`JPasswordField` contains text "`Hidden text`," but text appears as series of asterisks (*)

Register GUI components with `TextFieldHandler` (register for `ActionEvents`)

Outline

13.6 How Event Handling Works

- Two open questions from Section 13.4
  - How did event handler get registered?
    - Answer:
      - Through component's method `addActionListener`
      - Lines 39-42 of `TextFieldTest.java`
  - How does component know to call `actionPerformed`?
    - Answer:
      - Event is dispatched only to listeners of appropriate type
      - Each event type has corresponding event-listener interface
        - Event ID specifies event type that occurred

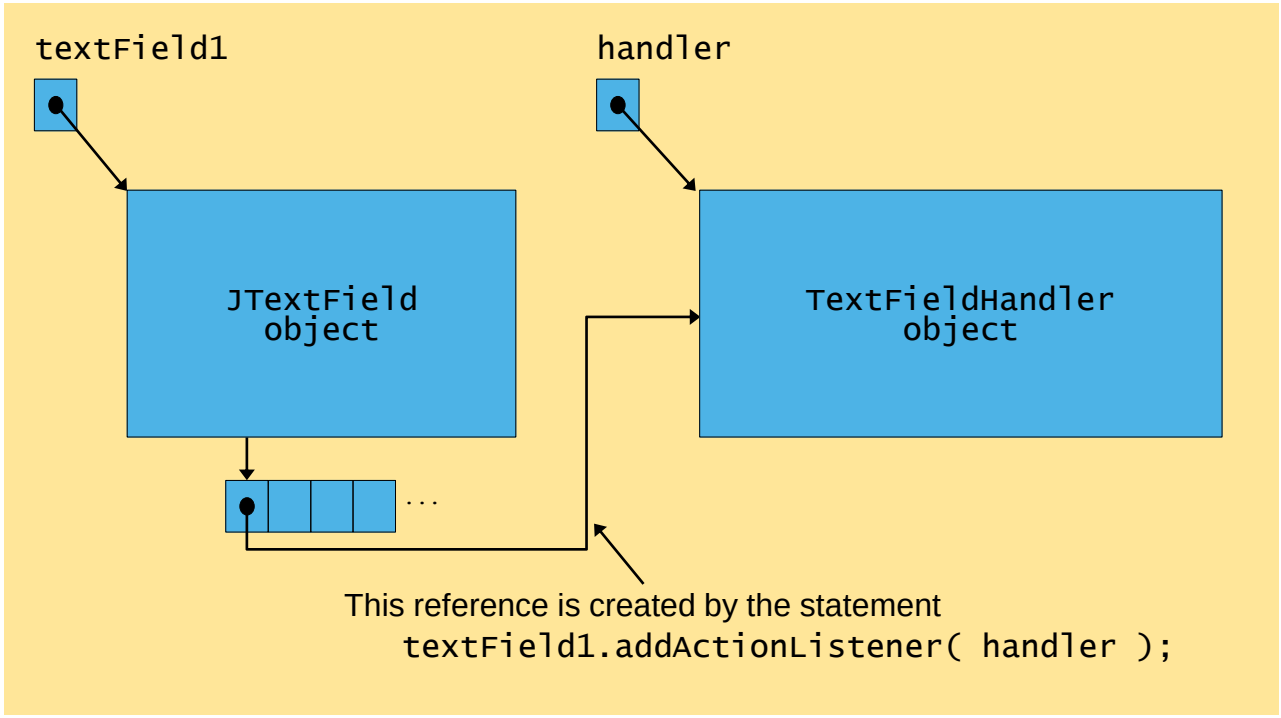
Fig. 13.8 Event registration for `JTextField` `textField1`



© 2003 Prentice Hall, Inc. All rights reserved.

13.7 JButton

- Button
  - Component user clicks to trigger a specific action
  - Several different types
    - Command buttons
    - Check boxes
    - Toggle buttons
    - Radio buttons
  - `javax.swing.AbstractButton` subclasses
    - Command buttons are created with class `JButton`
      - Generate `ActionEvent`s when user clicks button

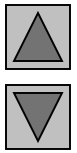
13.8 `JCheckBox` and `JRadioButton`

- State buttons
  - On/Off or `true`/`false` values
  - Java provides three types
    - `JToggleButton`
    - `JCheckBox`
    - `JRadioButton`

© 2003 Prentice Hall, Inc. All rights reserved.



Outline

CheckBoxTest.java

Line 9

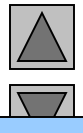
Line 22

```
1  // Fig. 13.11: CheckBoxTest.java
2  // Creating JCheckBox buttons.
3  import java.awt.*;
4  import java.awt.event.*;
5  import javax.swing.*;
6
7  public class CheckBoxTest extends JFrame {
8     private JTextField field;
9     private JCheckBox bold, italic;
10
11    // set up GUI
12    public CheckBoxTest()
13    {
14       super( "JCheckBox Test" );
15
16       // get content pane and set its layout
17       Container container = getContentPane();
18       container.setLayout( new FlowLayout() );
19
20       // set up JTextField and set its font
21       field = new JTextField( "Watch the font style change", 20 );
22       field.setFont( new Font( "Serif", Font.PLAIN, 14 ) );
23       container.add( field );
24
```

Declare two `JCheckBox` instances

Set `JTextField` font to Serif, 14-point plain

© 2003 Prentice Hall, Inc.
All rights reserved.



Outline

```
25        // create checkbox objects
26        bold = new JCheckBox( "Bold" );
27        container.add( bold );
28
29        italic = new JCheckBox( "Italic" );
30        container.add( italic );
31
32        // register listeners for JCheckBoxes
33        CheckBoxHandler handler = new CheckBoxHandler();
34        bold.addItemListener( handler );
35        italic.addItemListener( handler );
36
37        setSize( 275, 100 );
38        setVisible( true );
39
40     } // end CheckBoxText constructor
41
42     public static void main( String args[] )
43     {
44        CheckBoxTest application = new CheckBoxTest();
45        application.setDefaultCloseOperation( JFrame.EXIT_ON_CLOSE );
46     }
47
```

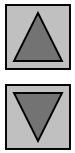
Instantiate `JCheckBox`s for bolding and italicizing `JTextField` text, respectively

Register `JCheckBox`s to receive events from `CheckBoxHandler`

.ja
va

Lines 26 and 29

© 2003 Prentice Hall, Inc.
All rights reserved.



Outline

```
48    // private inner class for ItemListener event handling
49    private class CheckBoxHandler implements ItemListener {
50       private int valBold = Font.PLAIN;
51       private int valItalic = Font.PLAIN;
52
53       // respond to checkbox events
54       public void itemStateChanged( ItemEvent event )
55       {
56          // process bold checkbox events
57          if ( event.getSource() == bold )
58             valBold = bold.isSelected() ? Font.BOLD : Font.PLAIN;
59
60          // process italic checkbox events
61          if ( event.getSource() == italic )
62             valItalic = italic.isSelected() ? Font.ITAL
63
64          // set text field font
65          field.setFont( new Font( "Serif", valBold + valItalic, 14 ) );
66
67       } // end method itemStateChanged
68
69    } // end private inner class CheckBoxHandler
70
71 } // end class CheckBoxTest
```

When user selects `JCheckBox`, `CheckBoxHandler` invokes method `itemStateChanges` of all registered listeners

Change `JTextField` font, depending on which `JCheckBox` was selected

Register `JRadioButtons` to receive events from `RadioButtonHandler`

Lines 55-60

© 2003 Prentice Hall, Inc.
All rights reserved.

Outline

```
81
82       // handle radio button events
83       public void itemStateChanged( ItemEvent event )
84       {
85          field.setFont( font );
86       }
87
88    } // end private inner class RadioButtonHandler
89
90 } // end class RadioButtonTest
```

When user selects `JRadioButton`, `RadioButtonHandler` invokes method `itemStateChanged` of all registered listeners

Set font corresponding to `JRadioButton` selected

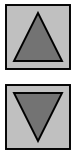
13.9 JComboBox

- JComboBox
  - List of items from which user can select
  - Also called a *drop-down list*

© 2003 Prentice Hall, Inc. All rights reserved.



Outline

ComboBoxTest.java

```
1  // Fig. 13.13: ComboBoxTest.java
2  // Using a JComboBox to select an image to display.
3  import java.awt.*;
4  import java.awt.event.*;
5  import javax.swing.*;
6
7  public class ComboBoxTest extends JFrame {
8     private JComboBox imagesComboBox;
9     private JLabel label;
10
11    private String names[] =
12       { "bug1.gif", "bug2.gif",  "travelbug.gif", "buganim.gif" };
13    private Icon icons[] = { new ImageIcon( names[ 0 ] ),
14       new ImageIcon( names[ 1 ] ), new ImageIcon( names[ 2 ] ),
15       new ImageIcon( names[ 3 ] ) };
16
17    // set up GUI
18    public ComboBoxTest()
19    {
20       super( "Testing JComboBox" );
21
22       // get content pane and set its layout
23       Container container = getContentPane();
24       container.setLayout( new FlowLayout() );
25
```

© 2003 Prentice Hall, Inc.
All rights reserved.

```
26        // set up JComboBox and register its event handler
27        imagesComboBox = new JComboBox( names );
28        imagesComboBox.setMaximumRowCount( 3 );
29        imagesComboBox.addItemListener(
30
31           new ItemListener() {  // anonymous inner class
32
33              // handle JComboBox event
34              public void itemStateChanged( ItemEvent event )
35              {
36                 // determine whether check box selected
37                 if ( event.getStateChange() == ItemEvent.SELECTED )
38                    label.setIcon( icons[
39                       imagesComboBox.getSelectedIndex() ] );
40              }
41
42           }  // end anonymous inner class
43
44        ); // end call to addItemListener
45
46        container.add( imagesComboBox );
47
48        // set up JLabel to display ImageIcons
49        label = new JLabel( icons[ 0 ] );
50        container.add( label );
51
```

Instantiate `JComboBox` to show three `String`s from `names` array at a time

Register `JComboBox` to receive events from anonymous `ItemListener`

When user selects item in `JComboBox`, `ItemListener` invokes method `itemStateChanged` of all registered listeners

Set appropriate `Icon` depending on user selection

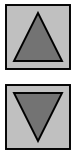
13.10 `JList`

- List
  - Series of items
  - user can select one or more items
  - Single-selection vs. multiple-selection
  - `JList`

© 2003 Prentice Hall, Inc. All rights reserved.



Outline

ListTest.java

```
1  // Fig. 13.14: ListTest.java
2  // Selecting colors from a JList.
3  import java.awt.*;
4  import javax.swing.*;
5  import javax.swing.event.*;
6
7  public class ListTest extends JFrame {
8     private JList colorList;
9     private Container container;
10
11    private final String colorNames[] = { "Black", "Blue", "Cyan",
12       "Dark Gray", "Gray", "Green", "Light Gray", "Magenta",
13       "Orange", "Pink", "Red", "White", "Yellow" };
14
15    private final Color colors[] = { Color.BLACK, Color.BLUE, Color.CYAN,
16       Color.DARK_GRAY, Color.GRAY, Color.GREEN, Color.LIGHT_GRAY,
17       Color.MAGENTA, Color.ORANGE, Color.PINK, Color.RED, Color.WHITE,
18       Color.YELLOW };
19
20    // set up GUI
21    public ListTest()
22    {
23       super( "List Test" );
24
25       // get content pane and set its layout
26       container = getContentPane();
27       container.setLayout( new FlowLayout() );
```

© 2003 Prentice Hall, Inc.
All rights reserved.

Outline

```
28
29       // create a list with items in colorNames array
30       colorList = new JList( colorNames );
31       colorList.setVisibleRowCount( 5 );
32
33       // do not allow multiple selections
34       colorList.setSelectionMode( ListSelectionModel.SINGLE_SELECTION );
35
36       // add a JScrollPane containing JList to content pane
37       container.add( new JScrollPane( colorList ) );
38       colorList.addListSelectionListener(
39
40          new ListSelectionListener() {  // anonymous inn
41
42             // handle list selection events
43             public void valueChanged( ListSelectionEvent event )
44             {
45                container.setBackground(
46                   colors[ colorList.getSelectedIndex() ] );
47             }
48
49          } // end anonymous inner class
50
51       ); // end call to addListSelectionListener
52
```

Use `colorNames` array to populate `JList`

`JList` allows single selections

Register `JList` to receive events from anonymous `ListSelectionListener`

When user selects item in `JList`, `ListSelectionListener` invokes method `valueChanged` of all registered listeners

Set appropriate background depending on user selection

13.12 Mouse Event Handling

- Event-listener interfaces for mouse events
  - `MouseListener`
  - `MouseMotionListener`
  - Listen for `MouseEvent`s

© 2003 Prentice Hall, Inc. All rights reserved.

Fig. 13.16 `MouseListener` and `MouseMotionListener` interface methods

`MouseListener` and **`MouseMotionListener`** interface methods	
Methods of interface `MouseListener`	
`public void mousePressed( MouseEvent event )`	
	Called when a mouse button is pressed while the mouse cursor is on a component.
`public void mouseClicked( MouseEvent event )`	
	Called when a mouse button is pressed and released while the mouse cursor remains stationary on a component.
`public void mouseReleased( MouseEvent event )`	
	Called when a mouse button is released after being pressed. This event is always preceded by a `mousePressed` event.
`public void mouseEntered( MouseEvent event )`	
	Called when the mouse cursor enters the bounds of a component.
`public void mouseExited( MouseEvent event )`	
	Called when the mouse cursor leaves the bounds of a component.
Methods of interface `MouseMotionListener`	
`public void mouseDragged( MouseEvent event )`	
	Called when the mouse button is pressed while the mouse cursor is on a component and the mouse is moved while the mouse button remains pressed. This event is always preceded by a call to `mousePressed`. All drag events are sent to the component on which the drag began.
`public void mouseMoved( MouseEvent event )`	
	Called when the mouse is moved when the mouse cursor on a component. All move events are sent to the component over which the mouse is currently positioned.

Fig. 13.21 `InputEvent` methods that help distinguish among left-, center- and right-mouse-button clicks

`InputEvent` method	Description
`isMetaDown()`	Returns `true` when the user clicks the right mouse button on a mouse with two or three buttons. To simulate a right-mouse-button click on a one-button mouse, the user can hold down the *Meta* key on the keyboard and click the mouse button.
`isAltDown()`	Returns `true` when the user clicks the middle mouse button on a mouse with three buttons. To simulate a middle-mouse-button click on a one- or two-button mouse, the user can press the *Alt* key on the keyboard and click the only- or left-mouse button, respectively.

13.14 Key Event Handling

- Interface `KeyListener`
  - Handles *key events*
    - Generated when keys on keyboard are pressed and released
    - `KeyEvent`
      - Contains *virtual key code* that represents key

13.15 Layout Managers

- Layout managers
  - Provided for arranging GUI components
  - Provide basic layout capabilities
  - Processes layout details
  - Programmer can concentrate on basic “look and feel”
  - Interface `LayoutManager`

© 2003 Prentice Hall, Inc. All rights reserved.

Fig. 13.23 Layout managers

Layout manager	Description
`FlowLayout`	Default for `java.awt.Applet`, `java.awt.Panel` and `javax.swing.JPanel`. Places components sequentially (left to right) in the order they were added. It is also possible to specify the order of the components by using the `Container` method `add`, which takes a `Component` and an integer index position as arguments.
`BorderLayout`	Default for the content panes of `JFrame`s (and other windows) and `JApplet`s. Arranges the components into five areas: `NORTH`, `SOUTH`, `EAST`, `WEST` and `CENTER`.
`GridLayout`	Arranges the components into rows and columns.

13.17 (Optional Case Study) Thinking About Objects: Use Cases

- Use case
  - Represents capabilities that systems provide to clients
    - Automated-teller-machine use cases
      - "Deposit Money," "Withdraw Money," "Transfer Funds"

© 2003 Prentice Hall, Inc. All rights reserved.

13.17 (Optional Case Study) Thinking About Objects: Use Cases

- Use-case diagram
  - Models use cases in system
  - Facilitates system-requirements gathering
  - Notation
    - Stick figure represents *actor*
      - Actor represents set of roles that *external entity* can play
    - *System box* (rectangle) contains system use cases
    - Ovals represent use cases

© 2003 Prentice Hall, Inc. All rights reserved.

13.17 (Optional Case Study) Thinking About Objects: Use Cases

- Elevator-simulation use cases
  - "Create Person"
    - From user's perspective
  - "Relocate Person" (move to other floor)
    - From **`Person`**'s perspective
- Constructing GUI
  - Use "Create Person" use case
